

# Proposed New Pipeline Through Rockingham and Alamance Counties

**Mountain Valley Pipeline Southgate would be a new 70 mile pipeline bringing fracked gas from WVA into NC.**

**It would cut through land from Reidsville down along the east side of Burlington, to end near I-85/40 east of Graham.**

## What Would Be The Impacts?

**Health and Safety Hazards** including pipeline leaks, explosions, and public health hazards due to compressor station emissions.

**Abuse of Property Rights** through minimal compensation or use of eminent domain, and destruction of forest and farmland.

**Damage to streams and wetlands**, where the pipeline crosses, and from construction sediment.

**Methane emissions**, from pipeline leaks and compressor station will contribute to climate change.

## Join Us!

**Learn more about the pipeline and how we can organize to fight it. Let's work together to protect our waters, land, and communities.**
